💼 Work Experience

Software Developer, 5 years

I got my first job as a developer in December of 2016, working as a full stack PHP developer for a payment terminal company called Europag.

In February of 2018 I got a new job at DSIN, an IT company specialized in solutions for traffic fines management. Besides working as a PHP developer, I have also developed the front-end of Estacione Legal, an app used for public parking management in many cities across Brazil. The site DSIN uses as a talent database was also developed by me (and you can actually see me holding a phone in one of the site's banners).

Yet in November of 2018, I've decided to leave DSIN and work for Próponto, a solution developer company for incentive campaigns. Once again working with full stack PHP, there were many projects I took part in: from promotional microsites to large incentive management platforms used by national and multinational companies such as Ambev, Canon, Mars and many others.

Computer Teacher, 4 years

Back in 2009, when I was only 16, I got the very first job of my life working as an instructor in a small computer training school. It was a pretty enriching experience where I developed not only my communication skills, but also my passion for teaching. I left the job in 2011.

2020 came up with the opportunity to work as a teacher at ETEC Antonio Devisate, a public specialty school in Marília. Due to the covid-19 pandemic, all of my classes were remote until October of 2021. Throughout my career in ETEC I taught several topics from basic computer usage (like Microsoft Office) to advanced programming (like developing a web application with Laravel) for more than 100 students from different courses, either by video or in-person lessons.

Computer Technician, 2 years

From mid 2011 to 2014, I worked as a clerk at M&M Lan House. Besides serving the clients, I was also responsible for software and hardware maintenance of the company's and clients' computers. Though this kind of service is not my main activity anymore, I still doing some computer maintenance jobs eventually.

🎓 Education

Systems Analysis and Development
FATEC Lins: Bachelor's degree, 2013 - 2017

Computer Technician
ETEC Lins: Associate degree, 2011 - 2012
